Skills & Technologies

Languages & Frameworks: Java, Go, Python, C#/.NET, Typescript

Technologies & Tools: GCP, AWS, Git, SQL, Maven, Gradle, Docker, CI/CD, Spring, Terraform

Certifications: AWS Certified Developer Associate (2021–2024)

Summary

Senior Software Engineer with expertise in scalable distributed systems, optimizing cloud spend, and enabling data-driven insights. Experienced in shaping engineering culture, improving development processes, and contributing to high-performing teams. Passionate about fostering collaboration, mentoring, and building reliable, maintainable solutions.

Experience

Arryved

Senior Software Engineer

Boulder, CO

December 2022 – Present

- Design and implement impactful features to enhance core functionality, driving business growth and operational efficiency.
- Integrate external and internal partner solutions, covering ERP, Payroll, and Accounting for seamless interoperability.
- Spearhead BI systems enabling insightful quarterly trends, customer insights, and enhancing internal decision-making.
- Analyze, optimize, and restructure queries and data components to slash 80% of CPU consumption in database systems.
- Direct rapid recovery strategies during outages, ensuring operational continuity while minimizing downtime.
- Guide junior engineers in system design fundamentals, cultivating expertise in cloud scalability and development best practices.

CS Disco

Senior Software Engineer

Austin, TX (Remote)

September 2021 – November 2022

- Achieved global scalability by engineering performant serverless solutions, processing over one billion invocations monthly.
- Established streamlined multi-regional deployment processes, validating distributed system reliability and consistency end-to-end.
- Enhanced production readiness with sophisticated logging, metrics, regression test suites, and Terraform-based provisioning.
- Diagnosed and mitigated multi-tenant SaaS environment issues, enhancing customer support with thoroughly detailed runbooks.

Apptio

Software Development Engineer II

Boulder, CO

August 2017 – August 2021

- Delivered robust backend solutions in Java, Go, and Python, specializing in cloud cost optimization and IT financial management.
- Scaled and stabilized multi-region microservices in AWS and Kubernetes environments, ensuring seamless customer experiences.
- Optimized database query performance, achieving over 50% improvement and reducing database size by 30% for key applications.
- Streamlined developer productivity by automating workflows with Python scripting and enhancing CI/CD pipelines.
- Fostered excellence in engineering through rigorous code reviews, mentoring, tech talks, and company-wide guild initiatives.

Education

University of Colorado

Computer Science – Bachelor of Science

Boulder, CO

Fall 2013 – Spring 2017

Minors: Mathematics, Economics

Honors: Cum Laude, Dean's List, CU Esteemed Scholar

Competitions & Mentoring

HackCU, T9 Hacks, Google Games
