SUMMARY

Senior Software Engineer with 9+ years of experience building scalable distributed systems, optimizing cloud infrastructure costs, and delivering data-driven insights. Proven record of tackling performance bottlenecks, leading cross-functional initiatives, and mentoring engineers across backend platforms in Java, Go, Python, and C#.

SKILLS & TECHNOLOGIES

Languages & Frameworks: Java, Go, Python, C#/.NET

Cloud & Infrastructure: AWS, GCP, Kubernetes, Terraform, Docker, CI/CD

Data & Databases: SQL, BI/Analytics Pipelines

Tools: Spring, Maven, Gradle, Git

EXPERIENCE

Arryved Boulder, CO

December 2022 – Present

Senior Software Engineer

- Designed and shipped revenue-generating features and partner integrations (ERP, payroll, accounting), directly driving business growth and customer retention.
- Reduced database CPU consumption by 80% by auditing query patterns, adding targeted indexes, and eliminating redundant queries.
- Built a BI reporting layer enabling quarterly trend analysis and customer-level insights, improving data-driven decision-making across product and operations.
- Led incident response during production outages and mentored 3+ junior engineers in cloud scalability, system design, and backend best practices.

CS Disco Austin, TX (Remote)

September 2021 – November 2022

Senior Software Engineer

- Engineered serverless solutions processing over 1 billion invocations per month, enabling global scalability for a high-throughput legal-tech SaaS platform.
- Established multi-regional deployment pipelines with end-to-end validation of distributed system consistency, reducing deployment risk across availability zones.
- Improved production readiness by implementing structured logging, custom metrics dashboards, regression test suites, and Terraform-based infrastructure provisioning.
- Resolved critical multi-tenant issues and authored detailed runbooks, materially improving support response times and system observability.

Apptio (now IBM) Boulder, CO

August 2017 – August 2021

Software Development Engineer II

- Delivered backend microservices in Java, Go, and Python for cloud cost optimization and IT financial management on AWS and Kubernetes, supporting enterprise customers managing hundreds of millions in cloud spend.
- Optimized database query performance by 50%+ and reduced database size by 30%, cutting infrastructure costs and improving response latency across key applications.
- Automated developer workflows with Python scripting, enhanced CI/CD pipelines, and promoted engineering quality through code reviews, tech talks, and guild initiatives.

EDUCATION

University of Colorado Boulder, CO

2017

Bachelor of Science, Computer Science — Minors: Mathematics, Economics

Cum Laude • Dean's List • CU Esteemed Scholar

COMPETITIONS & MENTORING

HackCU, T9 Hacks, Google Games
